

Introduction

Sewa Sadan Eye Hospital is one of the renowned Charitable Trust Hospital in Central India awarded with India's Highest Eye Care Award for 2018 (Dharamsey Nansey Oman Award for Outstanding High Quality, High Volume Comprehensive Eye Care Delivery), and it is the First NABH Accredited Multispecialty Eye Hospital in Madhya Pradesh equipped with ultra modern facilities providing excellent services in the field of Eye & Medical care since 1987. It has the super specialty wings equipped with latest technology and world class infrastructure, comprising of experienced and dedicated team of Doctors, Paramedical & Management to render qualitative treatment at a reasonable cost.

Hospital provides the treatment of all eye specialties under one roof i.e. Cornea, Glaucoma, Retina, Pediatric, Squint, Occuloplasty, Low Vision, Contact Lens, Cataract & Vision Therapy, Artificial Eye.

Sewa Sadan Eye Hospital provides Self Certified Course for Vision Technician. Vision Technician is an allied healthcare professional who possess comprehensive knowledge and experience in vision management, and to assist ophthalmologist and optometrist in prevention of blindness. A Vision Technician supports people affected by various refractive errors to understand and manage the condition.

Need for the Course

Sewa Sadan Eye Hospital felt that there is a need for a permanent eye care facility that could provide primary eye care to rural population. Hence it started establishing vision centres in rural areas.

A vision centre is a primary eye care centre that would serve a rural population of 20,000 - 50,000 on permanent basis. The functions of vision centre are

- Comprehensive Eye examination.
- Diagnosis and treatment of simple external eye diseases.
- Delivering spectacles on the spot to correct refractive errors.
- Diagnosis of diabetes through blood sugar examination and counselling appropriately.
- Helping the patient to interact with ophthalmologist in the base hospital through teleconference about the diagnosis and treatment.
- Diagnosis of secondary and tertiary eye problems and referring them appropriately to the base hospital.

To discharge the functions of the vision centre effectively, customized training of refractionist is necessary based on the skills necessary to run a vision centre successfully. The course will primarily focus on enhancing the skills of refraction practitioners, to upgrade their knowledge and to augment their ability in planning, organizing and execution.
